2018 HUNTING & TACTICAL LINES

Welcome to Primary Arms Optics. Founded in 2007, our mission is to bring our dealers and customers quality products, fast shipping, competitive pricing, and world-class customer service.

New Building:

PA Optics continues to grow. In the summer of 2017 we expanded our operations into an all-new 50,000+ sq. ft. facility. Custom designed to maximize efficiency, our new home gives us room to expand operations in the future.

New Technologies:

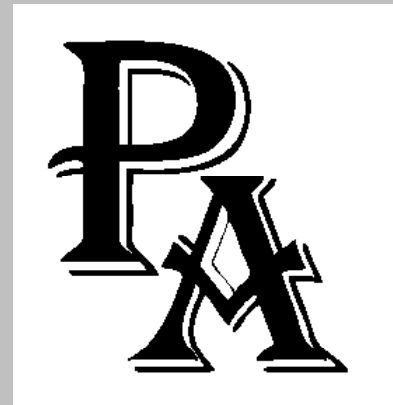

The PA Optics engineering department utilizes years of expertise and knowledge to develop industry leading product. We are continually improving our existing products using customer feedback and test data. We have proudly been first to market in recent years with multiple features and products, showcasing our innovation in red dots, high/low power variable scopes, and of course our patented, exclusive ACSS® reticles.

Quality Assurance:

The PA Optics Quality Assurance team thoroughly checks every individual optic product before it is deemed ready to ship. Other manufacturers may “spot check” a few samples, but our optics customers buy with confidence knowing that the product in their hand underwent a rigorous multi point inspection by the hardworking QA team right here in Houston.

Customer Service:

The PA Optics customer service team comprises more than a dozen shooting enthusiasts with truly encyclopedic knowledge. Many customer service representatives are veterans who served our nation at home and abroad. Available by chat, email or phone, they answer technical questions, help match customers to the products that are right for them, and ensure that PA Optics always stands proudly by our products.

THE WORLD'S MOST ADVANCED RETICLES

The Primary Arms Optics Advanced Combined Sighting System (ACSS®) reticles are simply the most advanced reticles in the world. Standing on the shoulders of proven reticle technologies of the past, ACSS combines the most useful reticle concepts into one easy to use system that is fast, instinctive, and easy to learn.

- **The Horseshoe/Chevron Center:** Unlike a crosshair which obscures the target at its intersection or a dot which covers the target, many ACSS reticles feature a chevron aiming point. The chevron creates an infinitely small point of aim while allowing the shooter to see the desired impact area. A thick horseshoe surrounding the center aiming point provides a quick aiming reference for close quarters “snap shooting” in a hurry.

- **Bullet Drop Compensation:** ACSS bullet drop compensation allows shooters to reach out to extended ranges depending on caliber and application. In some reticles the BDC allows accurate engagement all the way to 1000 yards without counting clicks on a turret.

- **Wind Holds:** Precision shooters say, “amateurs talk about bullet drop, professionals talk about wind calls.” Many ACSS reticles include wind hold dots alongside the BDC, making accurate shots possible in windy conditions. There is no need to manually adjust the scope, or perform any calculations.

- **Moving Target Leads:** Movers are the most challenging targets a hunter or competitive shooter may encounter. When faced with a moving target, some shooters will give up on the shot, and others will “Kentucky windage” their best guess and take an uncertain shot. Many ACSS reticles feature simple moving target leads optimized for targets moving across the shooter’s field of view at distances of 100-300 yards. ACSS HUD DMR reticles extend this capability out to 600 yards for targets moving at a variety of speeds.

- **Automatic Range Estimation:** Wrong range estimation is the number one reason that distant targets are missed out in the field. ACSS auto-ranging reticles can vertically range targets in moments, providing vital information that the shooter can easily translate to the reticle’s bullet drop compensation feature. Horizontal auto-ranging is built right into the BDC resulting in a range-and-engage system of unparalleled speed and accuracy.

Primary Arms Optics are covered by one or more pending and issued U.S. patents: 8,910,412; D726,280; D716,409; D720,033; D700,944; D767,077; D768,221; D745,105; 29/617,535; 29/603,713; 29/603,680; 29/603,671; 29/617,523; 29/603,696; 29/603,666; 29/603,703; 29/617,513; 29/617,518; 29/603,687

1X COMPACT PRISM SCOPES

A 1x prism scope offers an advantage over traditional red dots for many shooters and in certain situations. This tough, yet very compact optic features an etched ACSS reticle that can be illuminated all the way up to daylight bright, yet is still useable with illumination turned off. The 1x Prism Scope features a removable base compatible with industry standard micro dot mounts. An adjustable ocular allows each shooter to set the reticle focus perfectly for their eyes, allowing extremely fast yet accurate sight acquisition at close range with both eyes open.

ADVANCED MICRO RED DOTS

Small, light, and tough, the new Advanced Micro Dot takes everything we've learned from previous red dots and refines it a step further. MD-RB-AD features an estimated 50,000 hours of battery life from the included CR2032 battery, powering an ultra-sharp 2 MOA dot. Fully multi-coated lenses and an ultra-low profile emitter ensure a clean sight picture with minimal lens tint. Eleven brightness settings are controlled by the rotary knob on the right side. The first two settings are compatible with night vision optics and cannot be seen by the naked eye. The brightest settings are daylight bright. The illumination knob physically stops at "0" with the red dot turned off.

1-6X24MM FIRST FOCAL PLANE SCOPE

Introducing a new twist on a familiar theme! New for 2018, our 1-6x24 rifle scope is now available in First Focal Plane configuration. Fast at 1x, precise at 6x, the FFP design allows shooters to use the advanced features of the ACSS reticle at multiple zoom levels for the first time. At 1x the reticle shrinks down to essentially act as a center dot for speed and simplicity. The auto ranging, bullet drop compensation, wind hold and moving target leads will always properly function at any magnification setting.

ACSS RAPTOR™ 5.56 RETICLE

Simple and fast, this Raptor reticle is caliber specific to 5.56 NATO and .308 Win.

ACSS RAPTOR™ 7.62 RETICLE

A large center chevron provides both speed and accuracy. This Raptor reticle is caliber specific to 7.62x39 and 300BLK.

3X COMPACT & 5X PRISM SCOPES GEN II

The 3x and 5x prism scopes are improved for 2018! The MIL-STD-1913 top accessory rails are now user removable. Install the rail to mount a back-up reflex sight or bubble level on the prism scope, or remove the rail to save weight and space. All models now feature a removable spacer designed into the bottom MIL-STD-1913 mount. With the spacer installed, the optic is located at the same height as previous generations. Use the spacer on rifles with straight line stocks like AR-15s. Remove the spacer to lower the sight for use on AK-47s, or to mount directly to an AR-15 carry handle.

21 ATHENA™ BPR MIL RETICLE

Athena's crosshair section features .2 MIL subtensions for very precise range estimation at long distance. Underneath is a holdover grid featuring thick dots at 1 MIL increments with thin dots at .5 MIL increments between them. Athena provides a comprehensive but unobtrusive holdover system that gives plenty of aiming references out to extremely long range.

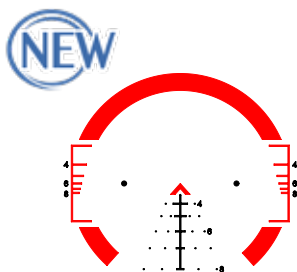

21 HERA™ BPR MOA RETICLE

Hera is the most precise reticle in the world at extremely long ranges. If you intend to push well beyond 1,000 yards, Hera is for you. The holdover grid reaches down to 50 MOA, with dot aiming points displayed in 1 MOA increments. When tied in with ballistic calculator software, advanced calculations like spin drift and Coriolis effect may be accounted for and applied to the firing solution via holdover reference instead of counting clicks.

22 ACSS GRIFFIN™ MIL RETICLE

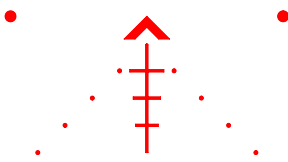

In a First Focal Plane application the Griffin is an all-in-one wonder that exceeds expectations for a 1-8x optic. At 1x the appearance is like a red dot or small "donut" for unsurpassed speed. At 8x the reticle "grows" to include automatic ranging to 600 yards, moving target leads, and a MIL matrix for precision shooting out to very long range. Seamless integration with the MIL system means Griffin FFP can be used with any caliber.

22 ACSS RAPTOR™ RETICLE

Simple and fast, the Raptor is caliber specific to 5.56 NATO / .308 Win or 7.62x39 / 300BLK. Classic ACSS features have been simplified and presented in a fresh format. A large center chevron provides both speed and accuracy. Bullet drop compensation, wind holds, range estimation, and moving target leads are all incorporated into this easy-to-use reticle.

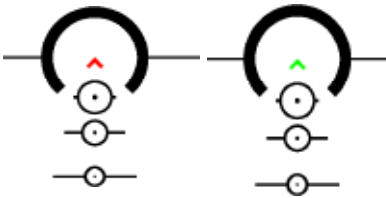

NEW

26 ACSS GRIFFIN™ MIL SFP RETICLE

Griffin is an outstanding combination of the best features of previous ACSS reticles. Fast in close quarters due its large chevron, it features bullet drop compensation and automatic ranging out to 600 yards native to 5.56 NATO and .308 Win. Yet it also corresponds with the MIL system, making it universal for all calibers.

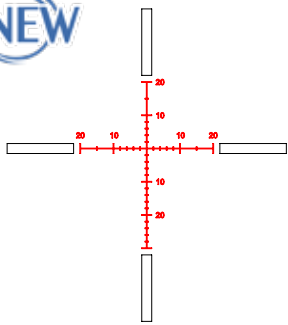

NEW

29 ACSS PREDATOR™ GREEN & RED RETICLE

Born to hunt! Coyote and hog hunters, this is the reticle for you. Calibrated to auto range a 10" circle, the Predator reticle ranges coyotes, pigs, and similarly sized animals with unprecedented quickness. When auto ranging is accomplished you are already on target and ready to fire with the correct holdover. Both red and green partial reticle illumination are incorporated, for maximum flexibility in a variety of shooting situations.

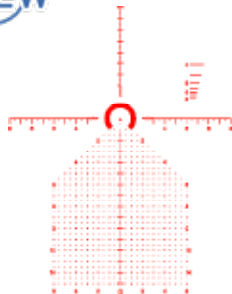

NEW

31 ARC™ 2 MOA RETICLE

ARC-2 MOA is a simple minute-of-angle based crosshair offered in scope bodies with 0.25 MOA per click adjustments for easy zeroing and traditional MOA-based ranging and shooting methods. A high degree of precision can be achieved using the hashmarks located in 2 MOA increments. ARC-2 MOA reaches down to 30 MOA below the crosshair center for holdover shooting at long range.

NEW

31 R-GRID® 2B RETICLE

R-Grid is back and better! The familiar chevron and horseshoe remain for up close snap shooting at low magnifications. The original line grid has been replaced with a dot matrix grid, giving more precise holdover references with less clutter, and extended down to 15 MIL below center. Auto-ranging ability and 0.1 MIL subtensions for precision are preserved as before.

TACTICAL

Tactical and competitive style shooting demands speed, accuracy, and above all toughness from both the shooter and their equipment. We offer a full range of red dots, prism scopes, low power variable scopes, and high magnification precision scopes suited perfectly for harsh environments. Competitive shooters, civilian shooting enthusiasts, and law enforcement professionals look to Primary Arms Optics for rifle scopes that match up perfectly with their tactical firearms.

HUNTING

The hunter, the firearm, and the optic must work together seamlessly because every shot is critical. We offers a complete line of dedicated hunting scopes to help hunters acquire a correct sight picture quickly and take their shot with maximum accuracy. From small game to feral hogs, from mule deer to elk. From up close snap shooting to precision shots at 800 yards and beyond, Primary Arms Optics has an optic perfect for any hunting application.

Night vision compatible illumination, side focus parallax adjust, and more.

1-8x First Focal Plane flexibility for fast, accurate engagement from CQB to medium range.

NEW SCOPE //

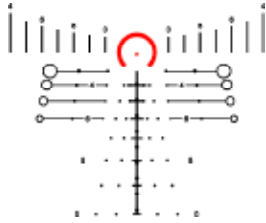

3-18X50MM FIRST FOCAL PLANE SCOPE

The 3-18x50 First Focal Plane Scope is changing shooters' expectations about what a precision rifle scope in this class can do. We built our reputation by being first-to-market with new scope technologies, and we have done it again with the all-new 3-18x50. At 3x magnification a sight picture can be acquired very quickly for snap shooting situations at short range. Yet a full 18x magnification on the high end is possible for the first time in an optic of this class, enabling high precision shots at very long ranges exceeding 1,000 yards. Innovations like a removable, replaceable power ring fin have combined with features demanded by our customers, like locking, zero-resettable target turrets. The 3-18x50 scope is an unbeatable combination that leaves our fans delighted and our competitors shaking their heads.

- First Focal Plane
- Partial or full reticle illumination in red, visible in bright sunlight
- Exit pupil: 16.2 mm to 2.7 mm
- Eye relief: 3.5 in to 3.9 in.
- Field of view at 100 yards: 36.7 ft. to 6.1 ft.
- Click Value: 0.1 MIL / 0.25 MOA
- Waterproof
- Fog resistant
- 30 mm tube
- Flip caps included
- Lifetime warranty

AVAILABLE COLORS:

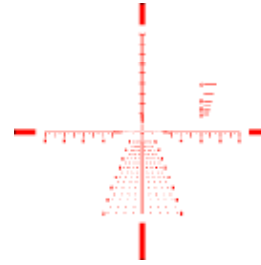

ACSS HUD DMR 5.56 RETICLE

Born to hunt! HUD DMR is the most advanced moving target reticle in the world, giving moving target leads for three different target speeds all the way out to 600 yards, and bullet drop compensation with wind holds all the way out to 1000 yards. Calibrated for 5.56 NATO, this reticle is compatible with both M193 and M855 loadings.

NEW RETICLES //

4-14X44MM FIRST FOCAL PLANE SCOPE

The 4-14x44 First Focal Plane scope is a tough, flexible rifle scope that has proven successful with a wide variety of reticles, from the classic Mil-Dot to the ACSS HUD-DMR. Features like side focus parallax adjust, optional red reticle illumination, and zero resettable turrets combine with recognized real-world performance to make the 4-14x44 set the standard in its class.

- First Focal Plane
- Side focus parallax adjust knob
- Exit pupil: 11.2 mm to 3.3 mm
- Eye relief: 3.1 in. to 3.2 in.
- Field of view at 100 yards: 27.2 ft. to 7.85 ft.
- Click value: 0.1 MIL / 0.25 MOA
- Waterproof
- Fog resistant
- 30mm tube
- Bikini lens cover included

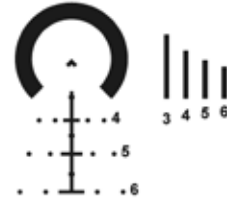

ACSS HUD DMR .308 RETICLE

Born to hunt! HUD DMR is the most advanced moving target reticle in the world, giving moving target leads for three different target speeds all the way out to 600 yards, and bullet drop compensation with wind holds all the way out to 1000 yards. Calibrated for .308 Win, this reticle can also be used with some .223 Rem and 5.45x39 loadings.

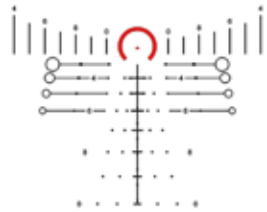

SKU: PA4-14XFFP308

ACSS ORION RETICLE

Born to hunt! The original ACSS hunting reticle, ORION is tailored to range and engage coyotes, deer, hogs, and other game out to 600 yards without running calculations or counting clicks. Simply range and engage while looking through the scope. Calibrated for .233 Rem, .308 Win, and .30-06, ORION is a simple but truly effective hunting solution that is now well proven in the field.

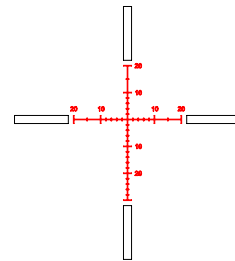

SKU: PA4-14XFFP-ORION

ACSS HUD DMR 5.56 RETICLE

Born to hunt! HUD DMR is the most advanced moving target reticle in the world, giving moving target leads for three different target speeds all the way out to 600 yards, and bullet drop compensation with wind holds all the way out to 1000 yards. Calibrated for 5.56 NATO, this reticle is compatible with both M193 and M855 loadings.

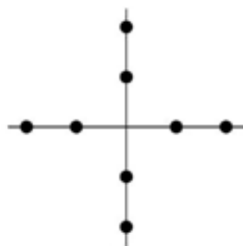

SKU: PA4-14XFFP-ACSS-HUD-DMR-5.56

ARC 2 MOA RETICLE

ARC-2 MOA is a simple minute-of-angle based crosshair offered in scope bodies with 0.25 MOA per click adjustments for easy zeroing and traditional MOA-based ranging and shooting methods. A high degree of precision can be achieved using the hashmarks located in 2 MOA increments. ARC-2 MOA reaches down to 30 MOA below the crosshair center for holdover shooting at long range.

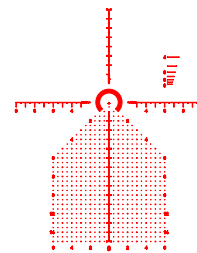

SKU: PA4-14X44FFP-ARC-2-MOA

MIL-DOT RETICLE

The traditional Mil-Dot reticle has been a mainstay of precision shooters for decades. Techniques to accurately estimate range and compensate for bullet drop are well-proven and second nature to many precision shooters and military veterans alike. The Mil-Dot is simple, unobtrusive, and undeniably useful.

SKU: PA4-14XFFP

R GRID 2B RETICLE

R Grid 2B is back and better than ever! The familiar chevron and horseshoe remain for up close snap shooting at low magnifications. The original line grid has been replaced with a dot matrix grid, giving more precise holdover references with less clutter, and extended down to 15 Mil below center. Auto-ranging ability and 0.1 Mil substensions for precision are preserved as before.

SKU: PA4-14X44FFP-R-GRID-2B

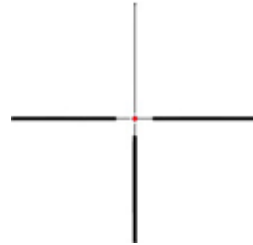

SCOPES

1-4X24MM SECOND FOCAL PLANE SCOPE

With generous eye relief, a simple duplex dot reticle with 12 brightness settings, and lightweight construction, the 1-4x24 Illuminated riflescope is an excellent entry-level choice for budget builds and first time low power variable users. Solid fundamentals combine to help the 1-4x24 outperform expectations in its class.

- Second Focal Plane
- German duplex reticle
- Illuminated center dot in red
- Eye relief: 3.5 in to 3.8 in
- Field of view at 100 yards: 76 ft. to 24 ft.
- Click value: 0.5 MOA
- Waterproof
- Fog resistant
- 30mm tube
- Flip caps included

DUPLEX DOT RETICLE

The duplex crosshair is a traditional and simple reticle known and understood universally by shooters around the world. Thicker sections around the edges guide the eye to easily find the thin lines intersecting in a simple illuminated dot at the center.

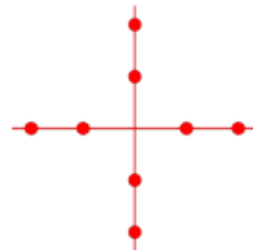

SKU: PA14X

4-16X44MM SECOND FOCAL PLANE SCOPE

The 4-16x44 Second Focal Plane scope features locking target turrets, 11 red illumination settings, and side focus parallax adjustment. Shooters who prefer the simplicity of Second Focal Plane presentation and the traditional, proven Mil-Dot reticle find the 4-16x44 meets their needs at an attractive price point.

- Second Focal Plane
- Full illumination in red, visible in bright sunlight
- Side focus parallax adjust knob
- 0.25 MOA locking resettable turrets
- Eye relief: 3.3 in to 3.5 in
- Field of view at 100 yards: 26.19 ft. to 6.98 ft.
- Waterproof
- Fog resistant
- 30 mm tube
- Flip caps included

MIL-DOT RETICLE

The traditional Mil-Dot reticle has been a mainstay of precision shooters for decades. Techniques to accurately estimate range and compensate for bullet drop are well-proven and second nature to many precision shooters and military veterans alike. The Mil-Dot is simple, unobtrusive, and undeniably useful.

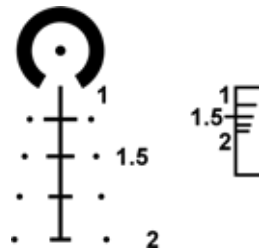

SKU: PA416X

6X32MM FIXED POWER SCOPE

The 6-32x44mm scope is our first scope to feature the ACSS .22LR reticle. This compact and tough, fixed 6x magnification scope is perfect for stretching your favorite .22 rifle all the way out to 200 yards using the range estimation and bullet drop compensation of the ACSS reticle.

- Fixed 6x magnification
- Ideal for shooting clay pigeons, cans and bottles
- Exit pupil: 5.1 mm
- Eye relief: 3.1 in.
- Field of view at 100 yards: 17.5 ft.
- Click value: 0.25 MOA
- Waterproof
- Fog resistant
- 1 in. tube
- Bikini lens cover included

ACSS .22LR RETICLE

The .22LR ACSS reticle takes your favorite rimfire cartridge to the next level! Automatic range estimation, wind holds, and bullet drop compensation make this the most advanced .22LR reticle in the world. Quickly range and engage common .22LR targets like clay pigeons, cans, and small critters all the way out to 200 yards with confidence.

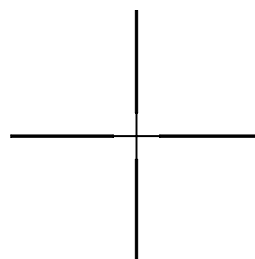

SKU: PA6X32-22LR

3-9X44MM SECOND FOCAL PLANE CLASSIC SCOPE

The 3-9x44 SFP Classic Scope combines traditional features with great value. Its simple design features a 30mm main tube, finger adjustable turrets protected by turret caps, a quick adjust ocular, and a simple duplex crosshair reticle. The Second Focal Plane design keeps the reticle the same size at any magnification. The 3-9x44 SFP Classic Scope is a great basic rifle scope for rimfire up to 5.56 NATO caliber.

- Second Focal Plane
- Exit pupil: 11.5 mm - 3.1 mm
- Eye relief: 3.6 in to 3.8 in
- Field of view at 100 yards: 38.4 ft. - 12.6 ft.
- Click value: 0.25 MOA
- Waterproof
- Fog resistant
- 30 mm tube
- Bikini lens cover included

DUPLEX RETICLE

The duplex crosshair is a traditional and simple reticle known and understood universally by shooters around the world. Thicker sections around the edges guide the eye to easily find the thin lines intersecting in a simple cross at the center.

PRISM SCOPES

PRISM SCOPES

NEW OPTIC //

1X COMPACT PRISM SCOPE

A 1x Prism Scope offers an advantage over traditional red dots for many shooters and in certain situations. This tough, yet very compact optic features an etched ACSS reticle that can be illuminated all the way up to daylight bright, yet is still useable with illumination turned off. The 1x Prism Scope features a removable base compatible with industry standard microdot mounts. An adjustable ocular allows each shooter to set the reticle focus perfectly for their eyes, allowing extremely fast yet accurate sight acquisition at close range with both eyes open.

- Full illumination in red, visible in bright sunlight
- Exit Pupil: 13 mm
- Field of view at 100 yards: 76.3 ft
- Eye relief: 3.7 in.
- Click Value: 0.5 MOA
- Waterproof
- Fog Resistant
- Flip caps included
- Lifetime Warranty

ACSS CQB™ RETICLE

Featuring partial red illumination, this simplified 1x CQB ACSS reticle auto ranges to 400 yards and provides bullet drop compensation to 400 yards in 5.56 / .308 or 300 yards in 7.62x39 / 300 BLK.

SKU: PAC1X-ACSS-CQB | PAC1X-ACSS-CQB-FDE

AVAILABLE COLORS:

2.5X COMPACT PRISM SCOPE

Featuring a wide field of view, robust construction, and illuminated CQB ACSS reticle, the 2.5x Compact AR-15 Prism Scope was designed from the ground up to be the ideal AR-15 CQB and mid-range optic at an attractive price point.

- Bullet drop compensation to 600 yards
- Full illumination in red, visible in bright sunlight
- Optional MIL-STD-1913 Picatinny accessory rail sold separately
- Exit Pupil: 10.16 mm
- Field of view at 100 yards: 37.5 ft
- Eye relief: 2.7 - 3.0 in.
- Click Value: 0.5 MOA
- Waterproof
- Fog Resistant
- Flip caps included

ACSS CQB™ RETICLE

ACSS reticle combines bullet drop compensation, wind and leads into one easy to use system calibrated for 5.56, 5.45x39, and .308.

SKU: PAC2.5X

NEW GENERATION //

3X COMPACT PRISM SCOPE WITH ACSS 5.56 OR 7.62X39/300BO RETICLES - GENII

When you need a lightweight, trim scope that can do it all, the PA Optics 3x Compact Prism Scope is an ideal solution. With ACSS reticles available for a variety of calibers, the new Gen II 3x Prism Scopes feature a removable top mount MIL-STD-1913 rail, and a removable spacer built into the mount so users can tailor the scope height to both AK-47 and AR-15 platforms.

- Removable spacer to adjust optic height for use on multiple rifle types
- Bullet drop compensation to 600 yards
- Full illumination in red, visible in bright sunlight
- Removable MIL-STD-1913 accessory rail
- Exit Pupil: 10.3 mm
- Field of view at 100 yards: 31.5 ft.
- Eye relief: 2.7 in to 3.0 in.
- Click Value: 0.5 MOA
- Waterproof
- Fog Resistant
- Flip caps included
- Lifetime Warranty

NEW OPTIC //

ADVANCED MICRO RED DOT WITH ROTARY SWITCH AND REMOVABLE BASE

Small, light, and tough, our new Advanced Micro Dot takes everything we've learned from previous red dots and refines it a step further. MD-RB-AD features an estimated 50,000 hours of battery life from a CR2032 battery, powering an ultra-sharp 2 MOA dot. Waterproofing and toughness are improved over previous models. The included MIL-STD-1913 base is removable and MD-RB-AD is compatible with all industry standard micro dot mounts. Your next red dot sight is right here.

- Approximately 50,000 hour battery life (5+ years) at medium setting
- Ultra crisp and efficient emitter
- Fits any industry standard micro mount and gives stated cowitness
- Uses 1 CR2032 battery included
- Ultra sharp 2 MOA dot
- Fully multi-coated anti-reflective lenses
- Visible in bright sunlight
- Night vision compatible
- Absence of parallax shift past 33 yards
- Waterproof
- Fog resistant
- Bikini lens cover included
- Lifetime warranty
